Summary	Data science and analytics professional with 3+ years of experience developing end-to-end predictive models, conducting statistical analyses, and communicating insights to stakeholders.		
Languages	Proficient: Python, R, SQL	Basic: Scala, HTML/CSS/JavaScript, C++	
Data Tools	Tableau, AWS, BigQuery, Git, Airflow, Docker, Kubernetes, Spark, Hadoop, Hive, Jenkins, Superset		
Education	University of Illinois at Urbana-Champaign M.S. in Statistics <i>Data Science & Analytics Concentration</i> <i>Relevant Courses: Machine Learning, Computational Statistics, Data Mining</i> B.S. in Civil & Environmental Engineering <i>Transportation & Systems Concentration</i>		
Experience	Nielsen	New York, NY Senior Data Science Analyst <i>Identity Graph Team</i> June 2021 - Jan 2023	
	○ Led development of identity graph ML model design, deployment & evaluation for activation ○ Developed KPI metrics for driving product strategy & experimentation for graph ML pipeline ○ Created versions of graph model built on a clustering algorithm with billions of devices ○ Built automated dashboards to monitor customer segmentation models for insights ○ Organized KPI framework with 50+ metrics in collaboration with data engineering team ○ Debugged ML modeling pipeline running 500+ models weekly to remove data leakage ○ Presented & documented ML model evaluation framework & methodology for reusability ○ Coordinated root cause analysis process across teams to resolve campaign issues ○ Collaborated with teammates in code reviews to productionize quality code in repository		
	Dentsu	New York, NY Data Science Analyst <i>Marketing Effectiveness Team</i> Sept 2019 - June 2021	
	○ Led development of composite scoring metric using dimensionality reduction to rank ads ○ Designed test & control selection of geo experiment to measure effectiveness of radio ads ○ Projected cost estimates of survey sample size baselines for Fortune 100 clients ○ Built time series model using 50+ variables for causal impact analysis to estimate incremental lift from brand campaigns with results that received positive feedback from financial client ○ Implemented feature engineering in predictive models improving accuracy over 10% ○ Oversaw end-to-end research & development of regression model for media mix modeling ○ Improved online ad performance by over 20% through optimizing frequency & A/B testing ○ Automated ETL data pipeline from multiple sources using APIs for daily or weekly reports ○ Generated data visuals to investigate discrepancies & provide insights for data storytelling ○ Collaborated across teams to ensure proper website tags for tracking in Adobe Analytics		
	Ameren	Champaign, IL Data Science Innovation Intern <i>Innovation Team</i> Jan 2018 - Dec 2018	
	○ Led a team of 5 interns on project for identifying individuals out of 1.4 million customers with high propensities of enrolling & saving in energy savings programs using demographic data of 150+ features to create a list of target customers - Applied Bayesian statistics with logistic regression for targeted marketing deliverables - Implemented random forest for 1% imbalanced class ratio & improved recall over 50% - Created custom views for exploratory data analysis to gain insights & form a data strategy ○ Utilized exploratory analysis methods to find patterns in pole health based on sensor data
